Tungsten Business Connect

Enable secure print & capture for your mobile workforces

Mobile Productivity App That Extends The Power of Tungsten Solutions to Smart Devices

Business Connect is a productivity app for businesses and organizations in need of extending business processes to their mobile workforces. With Business Connect, remote workers can send documents, photographs and other electronic files to their accounting, healthcare, ERP or any number of other business applications securely. What's more, Business Connect provides mobile workforces with the flexibility to complete business forms on their devices, virtually eliminating the need for paper-based forms used today. And for teams working in the office, Business Connect offers a secure and convenient means to print sensitive documents "on-demand" to a network printer.

Many applications offer a capture solution or a print solution or another isolated part of the process. However, with Business Connect you get a total solution, one with a unique combination of features that also extends the power of Tungsten ControlSuite, Tungsten Equitrac, Tungsten AutoStore and Tungsten Output Manager to smart devices. Business Connect allows mobile workers to work efficiently and deliver quality information downstream.

Business Connect Major Capabilities

Mobile capture on the go

With Business Connect, you can deliver information back into your business processes securely, whatever the format: a picture taken on your mobile device, an email attachment, a file downloaded from a cloud-hosted service, or from any application on your mobile device. Business Connect allows PDF, Microsoft Word, PowerPoint and Excel document captures.

Electronic forms

Forget about having to find, print, carry and return paper forms. With Business Connect, you can extend back office business applications directly to your mobile device. New patient admittance, claims processing or any other forms-based application is delivered securely to your remote workforce. Data can be validated easily with document management or other line of business applications directly within the form itself. As a result, processes are completed faster and more accurately.

Barcode scanning with lookup

Barcodes help businesses speed work and improve data accuracy. With Business Connect, enjoy these same benefits when on the go. By simply reading a barcode with your mobile device, populate eForm fields instantaneously with accurate data pulled right from the company's database. Tungsten Business Connect supports many widely used barcode types, allowing mobile workers to complete electronic forms efficiently for almost any application.

eSignature: Acknowledge consent, anywhere, anytime

Keep business on track with signatures captured electronically and sent from smart devices. Business Connect allows workers to obtain the consent they need quickly to perform tasks, validate information and obtain approval. Business Connect allows for easy signing directly on the mobile device screen. Workers, managers and executives can collect and deliver the required approvals any time, any place, enabling work to move forward while they are on the go.

Geo-tagging information

Deliver a deeper understanding of the situation when you include geo-location information with your mobile documents and photographs. Use map coordinates to validate where the work was performed. Audit mobile workforces by reviewing location history. Look up an address by simply pointing to it on the map.

Secure file access

There's no need for unsecured device-side storage, third-party services or cloud storage to support the exchange of information with your mobile workforce. Now, mobile workers can tap into the company network from wherever they are. Business Connect "MyFiles" connects workers to their networked Home Directory, affording them secure access to their files and shared network folders. By leveraging AutoStore, mobile workers can exchange information securely with the enterprise's content management systems.

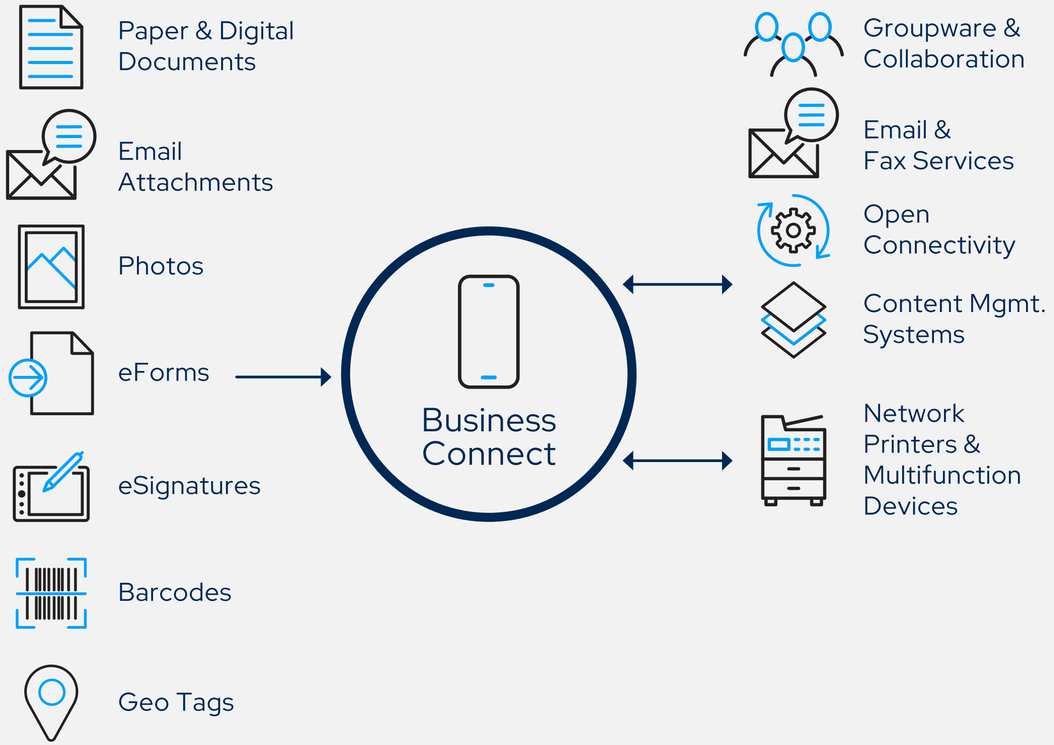

Secure mobile print: safely print, wherever, whatever, whenever

Initiate print jobs from your smart phone or tablet, wherever you are. Your information waits safely in the print queue until you release it securely at a network printer or MFD by reading the printer's barcode with your mobile device. Business Connect keeps information secure until it is needed and eliminates the sprint to the device to pick up confidential information. With Business Connect, office workers, mobile teams and employees on the go can use their mobile devices to print securely to any network printer.

Microsoft SharePoint®

Thousands of companies use Microsoft SharePoint for collaboration and information storage. Now, with Business Connect, access through Microsoft SharePoint is extended to smart devices. Whether in the office or on the go, access the files you need and deliver information to your colleagues. Browsing, viewing, attaching and printing Microsoft SharePoint documents is easy from your mobile device.

MOBILE WORKFLOWS FOR PRINT AND CAPTURE

Bi-directional database connectivity

Now, looking up information on a customer, patient or product and dis-playing it on your tablet is easier than ever with Business Connect. Using simple lookup fields, users can return values stored in backend databases and use it for indexing data in real-time. This minimizes the time spent entering data, and the chances of it being entered incorrectly.

Runs on iOS and Android

Business Connect is an app that runs on iOS and Android operating systems. It extends the powerful capabilities built into these devices with intuitive mobile data-capture and print applications that are built upon the ControlSuite, Equitrac, AutoStore and Output Manager platforms.

About Tungsten Automation

Tungsten Automation, formerly Kofax, is the global leader in intelligent automation solutions with a trusted legacy of nearly 40 years, with a team of 2,000+ employees in 40 countries, serving 25,000+ global customers. Our dedication to innovation and customer success has earned us industry recognition, including being named a leader in Intelligent Automation (IA), Intelligent Document Processing (IDP) and Process Orchestration by top analysts. We are trusted to help businesses gain unprecedented efficiencies and reduce costs through AI-powered workflow automations that propel their businesses into the future.
